

Manchester's citizens' mobility is improved.

Rediweld have recently completed a successful installation of its innovative Buspad for Manchester City Council, to provide raised platforms at bus stops. Each BusPad was installed in under an hour at less than half the expense of traditional methods and much less disruption – also if they decide to change bus routes they can be relocated easily.

"Manchester City Council are very pleased with the ten BusPad locations recently installed around the city. This product works well on a wide variety of footpath types and conditions, providing a secure and cost effective raised platform for passengers. At all locations it's clear that both passengers and bus drivers are intuitively using the yellow bar of the platform as a focal point, easily providing greatly improved access" **Steve Rose – Manchester City Council.**

Award winning BusPad is part of a range of Traffic Products made in the UK from recycled rubber by Rediweld, an ISO9001:2008 company.
