

Unique new Vehicle Stopper protects pedestrians

As one of several new products launched by Rediweld at this years' Traffex show, Vehicle Stopper 70, is designed to improve site safety in areas used for parking and access.

At the Royal Mail Delivery Office Hythe, Hampshire, the Vehicle Stopper prevents cars from encroaching onto a narrow pedestrian footpath which forms the only pedestrian access to the site. This is achieved with a continuous run of 27m which was easily installed with minimum disruption to business.

The Vehicle Stopper 70 has a unique profile which ensures effective vehicle restraint without any risk of damage to cars. The durable product is made from recycled rubber with high visibility markings and supplied in 1 m lengths. It can be installed on concrete or tarmac for both surface and multi-storey applications.

Rediweld also supply a range of traffic calming, inclusive mobility, crash friendly and site safety products.
